

IA SEO Generator 1.1.0 turns ten AI-readiness resources into an interconnected architecture

Mediterranea Services introduces a new evolution of IA SEO Generator: 10 Core Resources become part of The Interpretation Layer™, a coordinated infrastructure within a company's own domain.

Sabadell (Barcelona), 28 September 2026. - Mediterranea Services today introduces IA SEO Generator 1.1.0, a new version that marks an architectural shift in the technology developed by the company to prepare business information for artificial intelligence systems.

The evolution addresses a problem identified through the development and real-world use of the product: generating information is no longer enough as the number of resources a company publishes for AI systems grows.

A resource may be generated but not published. It may be published but not accessible. It may become outdated, lose consistency with other resources, or sit behind security configurations that make external access difficult.

10 CORE RESOURCES → 1 INTERCONNECTED INTERPRETATION LAYER™

lms.txt · humans.txt · metadata.json · sitemap-ia.xml · ai-plugin.json · organization.json · interpretation-layer.json · ai-resources.json · interpretation-governance.json · interpretation-proof.json

"This is not simply about generating more files. The shift is about enabling those resources to become part of the same infrastructure, maintain relationships with one another, and give the owner mechanisms to understand and control their state."

Héctor Martínez Rodríguez · CEO of Mediterranea Services

From independent files to infrastructure

Version 1.1.0 introduces mechanisms designed to coordinate and verify the new architecture. Among them is ILID - Interpretation Layer ID™, which provides the layer with a persistent identity even as its resources evolve or are regenerated.

The architecture also incorporates integrity mechanisms using SHA-256 and interpretation-proof.json, together with provenance and governance information: OWNER_DECLARED · WEBSITE_DERIVED · SYSTEM_GENERATED · HUMAN_VERIFIED.

Another new component is Interpretation Consistency™, designed to check identity, resources, references, provenance and potential drift across the infrastructure.

INTEGRITY ≠ CONSISTENCY ≠ ACCESSIBILITY

A resource can maintain valid integrity and still be inaccessible from outside. It can also be accessible while becoming inconsistent with the rest of the infrastructure. Separating these dimensions makes it possible to diagnose each problem independently.

Accessibility, security and publication

IA SEO Generator 1.1.0 includes diagnostics related to robots.txt, HTTP responses and agents such as OAI-SearchBot, OAI-AdsBot and GPTBot, providing information about the technical accessibility of published resources.

It also considers potential blocking signals from Cloudflare, WAFs, CDNs, Bot Protection, or HTTP 403 and 429 responses. The system does not disable or attempt to bypass these security measures; it diagnoses potential restrictions so the owner can decide how to manage the infrastructure.

GENERATED → PUBLISHED → ACCESSIBLE

IA SEO Generator also coexists with the WordPress SEO ecosystem, including detection of Yoast, Rank Math and AIOSEO, without replacing the role of those tools.

More than 3,000 downloads and learning from production

IA SEO Generator has surpassed 3,000 downloads, while Mediterranea Services also maintains installations running in production on client websites across different WordPress configurations, page builders, SEO plugins, servers, caching systems, CDNs, firewalls and security tools.

This variety of environments makes it possible to identify behaviours and incompatibilities that are difficult to reproduce exclusively in development environments.

“What we observe in production goes back into the product. Many of the decisions incorporated into 1.1.0 come directly from situations we have encountered while working with real installations.”

Héctor Martínez Rodríguez · CEO of Mediterranea Services

This experience is reflected in features related to publication and accessibility checks, diagnostics for potential external blocking, protection of previously edited resources, and coexistence with other WordPress components.

The owner remains in control

The new infrastructure is not initialized automatically simply because the plugin has been installed.

INSTALL → ACTIVATE → INITIALIZE THE INTERPRETATION LAYER™ → ACTIVE

The owner decides when to initialize The Interpretation Layer™ and can edit, protect or regenerate resources while retaining control over the infrastructure published within the company’s domain.

Free and Premium evolve with different purposes

Alongside this launch, IA SEO Generator Free 1.0.5 has also been published on WordPress.org. The Free edition retains a specific purpose: generating a cleaner and more useful llms.txt, with improvements to content extraction, filtering, Markdown structure and detection of physical llms.txt files.

FREE 1.0.5
ONE RESOURCE · LLMS.TXT

PREMIUM 1.1.0
AN INTERCONNECTED INFRASTRUCTURE

The Interpretation Layer™

The new architecture forms part of a research direction that Mediterranea Services began more than a year before publicly announcing this direction on 22 September 2025.

The Interpretation Layer™ is conceived as a layer for structuring, publishing, connecting, maintaining and controlling the information a company chooses to make available to emerging artificial intelligence systems.

IA SEO Generator - Interpretation · IA SEO Monitor - Visibility and control · IA Shop Connector™ - Commerce.

“Models, formats and standards will continue to evolve. That is why our approach is not based on trying to predict which file will be the most important three years from now. The infrastructure itself has to be able to evolve.”

Héctor Martínez Rodríguez · CEO of Mediterranea Services

Pioneers worldwide since 22 September 2025 in preparing businesses for AI systems, Mediterranea Services summarizes the thesis behind this development in two lines:

**RECOMMENDATION IS THE CONSEQUENCE.
INTERPRETATION COMES FIRST.**

About IA SEO Generator

IA SEO Generator is a WordPress technology developed by Medser International Marketing, S.L. / Mediterranea Services to prepare and maintain information infrastructure for artificial intelligence systems.

Version 1.1.0 incorporates 10 Core Resources coordinated within 1 Interconnected Interpretation Layer™, together with mechanisms for identity, integrity, provenance, consistency, accessibility, publication, diagnostics, protection and control.
